

EduCore

CONNECTED SCHOOL MANAGEMENT

SCHOOL PARTNERSHIP PROPOSAL

Turn school operations into one connected, accountable system.

EduCore brings admissions, academics, finance, payroll, staff management, attendance, examinations, communication and family access together in one secure platform built for Nigerian schools.

Web and native Android app

Role-based portals

Nigerian payroll and payments

Per-term pricing

01 / EXECUTIVE SUMMARY

A practical digital operating system for the whole school

Schools do not need another isolated portal. They need one reliable operational backbone: a system that keeps every learner, staff member, payment, timetable, assessment and parent interaction connected to the same trusted record.

The proposal: deploy EduCore as the school's central management platform, migrate priority records, configure school policies and roles, train users, and launch in controlled phases with direct implementation support.

One record

Students, guardians, staff and operations stay connected.

Every role

Purpose-built access for leaders, teachers, finance, parents and learners.

Anywhere

Responsive web access plus an Android app for daily work.

The business problem

Fragmented administration

Spreadsheets, paper registers and chat groups create duplicate records, slow reporting and weak accountability.

Revenue leakage

Manual invoicing, reminders and reconciliation make it difficult to see balances, overdue commitments and collection performance.

Slow academic workflows

Timetables, attendance, scores, report cards and exam duties are repeatedly rebuilt instead of flowing through one process.

Limited family visibility

Parents and learners depend on delayed, informal updates instead of secure self-service access to relevant records.

02 / WHAT EDUCORE DELIVERS TODAY

A mature platform across the school lifecycle

The current EduCore platform goes beyond basic student records. It coordinates teaching, finance, people, welfare and school operations through tenant-isolated data and role-aware workflows.

Admissions and students

- Public applications and document review
- Interview scoring and offer letters
- Enrollment, class placement and transfers
- Student ID cards, lifecycle and alumni records

Academics and assessment

- Sessions, terms, classes and subjects
- Timetables and AI-assisted lesson planning
- Scores, gradebooks and report cards
- CBT, exam periods, duties and timetables
- Transcripts, skills and academic risk flags

Attendance

- Student daily attendance
- Staff clock-in with QR and optional location controls
- Proxy attendance with evidence capture
- Attendance analytics for authorized users

Finance and procurement

- Fee structures, invoices and payment plans
- Paystack, Flutterwave and Monnify support
- Receipts, reminders and reconciliation
- Expenses, vendors and purchase orders
- Scholarships, assets and finance analytics

People and payroll

- Staff records and employment lifecycle
- Recruitment and public careers portal
- Leave and substitute coverage
- Nigerian PAYE, pension and payslips
- One-time disciplinary deductions linked to payroll
- Staff ID cards and mobile access

Operations and engagement

- Parent, student and staff portals
- Messaging, announcements, email and SMS
- Library, transport, hostel and health
- Visitors, inventory and support workflows
- Exports, dashboards and multi-campus oversight

03 / OUTCOMES FOR YOUR SCHOOL

Move from record keeping to operational control

EduCore is designed to improve the quality and speed of decisions, reduce preventable administrative work and create a better experience for families and staff.

1 Strengthen fee collection

Generate consistent bills, expose outstanding balances, support online payment, issue receipts and focus reminders on accounts that need action.

2 Shorten reporting cycles

Move attendance, assessment, results, report cards and analytics through connected workflows instead of rebuilding information manually.

3 Improve accountability

Role permissions, approval states, audit-friendly records and linked operational data make ownership and exceptions easier to see.

4 Professionalize staff administration

Connect attendance, leave, recruitment, salary configuration, payroll, payslips and disciplinary financial actions to staff records.

5 Give families useful self-service

Parents and learners can access relevant fees, results, attendance, announcements and messages securely without unnecessary office visits.

6 Protect continuity as the school grows

Standardized workflows reduce dependence on individual spreadsheets and support consistent operations across roles and campuses.

Role-specific experience

User	What EduCore enables
School leadership	Operational dashboards, approvals, analytics, risk visibility and oversight across modules.
Teachers and staff	Assigned classes, attendance, scores, lessons, timetable, exam duties, leave, messages and mobile tools.
Finance team	Fees, payments, reconciliation, expenses, procurement, payroll and financial reporting.
Parents and learners	Secure access to linked records, results, attendance, fees, notices and school communication.

04 / LAUNCH PLAN

A controlled rollout measured in days, not months

Implementation is sequenced around the school's readiness. Critical records and high-value workflows go live first; advanced modules follow after core users are confident.

1. Discovery	2. Configure	3. Migrate	4. Train	5. Launch
Confirm goals, roles, policies, data sources and launch priorities.	Set school identity, sessions, classes, permissions, fees and payroll rules.	Import, validate and reconcile priority student, staff and finance records.	Role-based practical sessions for administrators, teachers and finance users.	Go live with monitored adoption, issue resolution and post-launch review.

Recommended first-phase scope

- School structure, users, roles and permissions
- Active students, guardians, staff and class enrollment
- Current-term fees, balances, payment channels and receipts
- Timetable, attendance, assessment structure and communication
- Payroll settings and authorized staff mobile access

Governance and safeguards

Tenant separation

Each school's operational records are scoped to its organization and protected by authentication and authorization controls.

Role-based access

Users see the modules and records required for their responsibilities, including linked-child access for parents.

Operational validation

Schools retain approval responsibility for fees, payroll, results, communications and statutory settings before relying on outputs.

Ongoing support

Implementation includes guided configuration, training and a structured route for support and platform notices.

05 / INVESTMENT

Transparent pricing that scales with enrollment

Every school receives the complete EduCore platform. The model is based only on active student enrollment: smaller schools can start free, while growing schools pay one predictable termly rate with no feature tiers.

Active enrollment	Rate	Billing cycle
Up to 50 students	Free	No charge
51+ students	NGN 300 per active student	Per academic term

One model, every feature: web and Android access, all supported modules and role-based portals are included. There are no percentage discounts or feature-based subscription tiers.

Payment-provider transaction charges, optional SMS usage, custom integrations, exceptional data migration and bespoke on-site services may be scoped separately where required.

What happens next

1. Schedule a 45-minute operational discovery session.
2. Receive a configured demonstration using the school's workflow priorities.
3. Confirm implementation scope, commercial terms and launch owner.
4. Begin configuration and data-readiness activities.
